

Sleep Function

A serverless REST API endpoint built with [Zoho Catalyst](#) that sleeps for a specified duration.

Overview

This is a lightweight function-as-a-service (FaaS) application demonstrating a basic HTTP endpoint on the Zoho Catalyst platform. It accepts either a `seconds` or `milliseconds` parameter and pauses execution for that duration before returning a response.

Project Structure

```
sleep/
├── .catalystrc           # Local Catalyst configuration
├── catalyst.json        # Project manifest
├── functions/
│   └── sleep_function/
│       ├── index.py      # Handler implementation
│       ├── catalyst-config.json # Function configuration
│       └── requirements.txt # Python dependencies
```

Technology Stack

- **Platform:** Zoho Catalyst
- **Runtime:** Python 3.9
- **Function Type:** BasicIO (HTTP request/response handler)

API Reference

Sleep Endpoint

Endpoint: `/sleep_function`

Method: GET

Parameters:

Parameter	Type	Required	Description
<code>seconds</code>	number	*	Number of seconds to sleep (0-30)
<code>milliseconds</code>	number	*	Number of milliseconds to sleep (0-30000)

* Provide one or the other, not both. Do NOT exceed 30 seconds or 30000 milliseconds

Example Requests:

Using seconds

```
curl "https://sleep-900403292.development/sleep_function?seconds=5"
```

Using milliseconds

```
curl "https://sleep-900403292.development/sleep_function?milliseconds=500"
```

Success Response:

```
{
  "success": true,
  "message": "Slept for 5 seconds",
  "slept_for": 5,
  "unit": "seconds"
}
```

```
{
  "success": true,
  "message": "Slept for 500 milliseconds",
  "slept_for": 500,
  "unit": "milliseconds"
}
```

Error Responses:

Missing parameter:

```
{"error": "seconds or milliseconds parameter is required", "usage": "?s"}
◀ | | ▶
```

Both parameters provided:

```
{"error": "Provide either seconds or milliseconds, not both", "usage": "?s"}
◀ | | ▶
```

Invalid type:

```
{"error": "Invalid seconds parameter. Must be a number.", "provided": "abc"}
◀ | | ▶
```

Out of range:

```
{"error": "Maximum sleep time is 30 seconds", "provided": 60}
```

Negative value:

```
{"error": "Seconds must be non-negative", "provided": -5}
```

Dependencies

- zcatalyst-sdk==1.0.3 - Zoho Catalyst Python SDK

Installation

Prerequisites

- Python 3.9+
- Zoho Catalyst CLI

Local Setup

```
pip install -r functions/sleep_function/requirements.txt
```

Deploy to Catalyst

```
catalyst deploy
```

Configuration

The function is configured via catalyst-config.json:

- **Runtime:** Python 3.9
- **Type:** BasicIO
- **Entry Point:** index.py
